Maximum Marks	2 Marks

QUESTION-1:

Build a python code, Assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature.

SOLUTION:

Let us consider normal

temperature=40 Celsius and normal

humidity=65% '''

import random

Temperature=random.randint(1,100)

Humidity=random.randint(1,100)

print("Temperature:")

print(Temperature)

print("Humidity:")

print(Humidity)

if((Temperature>40)&(Humidity>65)):

print("Values are HIGH!!! ")

print("ALERT")

if((Temperature>40)&(Humidity<65)):

print("Tempertaure Value is HIGH!!!

") print("Check Temperature")

if((Temperature<40)&(Humidity>65)):

print("Humidity Value is HIGH!!! ")

print("Check Humidity")

if((Temperature<40)&(Humidity<65)):

print("All Values are in limit!!! ")

print("SAFE ZONE")

OUTPUT:

```
main.py  Run  Shell

2 import random
3 Temperature=random.randint(1,100)
4 Humidity=random.randint(1,100)
5 print("Temperature:")
